

Litepaper

Where Degen Meets Discipline.

Introduction

SOSANA is a community-driven meme token built on the Solana blockchain. It's designed to embrace the chaos of crypto while solving real issues, empowering its holders through a transparent community-led voting system, a strategic liquidity plan, and a long-term sustainability model. In short, SOSANA combines degen excitement with solid tokenomics and governance to keep the project fun and sustainable.

Tokenomics

Total Token Supply: 88,888,888 SOSANA

Circulating Supply at Launch: 43,399,996 SOSANA (approximately 49%)

At launch, roughly half of the SOSANA supply is in circulation, distributed to early stakeholders and for initial liquidity. The other half is locked and will be released gradually according to a vesting schedule. Below is the initial allocation breakdown:

- Team Tokens – 24,711,108 SOSANA: Allocated to the core team (about 27.8% of total supply). These tokens are subject to a vesting schedule over the first 18 months to prevent sudden dumps and ensure long-term alignment.
- Airdrop Tokens – 8,888,888 SOSANA: Set aside for community giveaways, marketing promotions, and strategic airdrops. These tokens (around 10% of the total supply) are controlled by the SOSANA team and will be distributed over time.
- Initial Liquidity Pool – ~9,800,000 SOSANA: Approximately 11% of the total supply is paired with SOL to provide a strong liquidity foundation for trading at launch. This liquidity pool is permanently locked using a third-party service.
- Remaining Reserve – ~45,488,892 SOSANA: The rest of the supply (about 51.2%) is locked in the project's treasury. These tokens will be introduced into circulation gradually via a long-term vesting plan.

Transaction Tax Model (3%)

- 1% to Liquidity Pool (LP): Automatically added to the liquidity pool to ensure price stability.
- 1% to Marketing: Funds promotional efforts, partnerships, and community outreach.
- 1% to the Degen Voter Bonus: Rewards voters who back winning tokens in community-led votes.

Liquidity Strategy

SOSANA's liquidity strategy ensures stability while allowing for growth. The liquidity pool is locked and expands automatically through transaction taxes.

Team Vesting Schedule

To prevent market flooding, the team follows a structured vesting schedule over 18 months:

- Month 1: 10% unlocked
- Months 2–6: 8% per month
- Months 7–11: 6% per month
- Month 12: 4% unlocked
- Months 13–16: 3% per month
- Months 17–18: 2% per month

Fully vested at Month 18

In the chart above, the monthly unlock percentages for team tokens are illustrated across the 18-month vesting period. The schedule starts with 10% released in the first month, then 8% each month for months 2 through 6, and gradually tapers off in later months. Notably, month 12 has a smaller 4% release (instead of 6%) to ensure the total allocation sums to exactly 100%. By Months 17–18, the unlock rate is down to 2% per month, with all team tokens fully vested by the end of Month 18. This structured release prevents any sudden oversupply, supporting long-term price stability and investor confidence.

Post-Cliff Token Release Schedule

In addition to the team vesting schedule, the remaining reserved tokens (~45.4 million SOSANA) will be introduced into circulation in a controlled manner after an initial 6-month cliff period. This ensures a gradual increase in available supply without disrupting market stability.

Cliff reserve vesting schedule is as follows:

- Months 1–6: Cliff period (no release)
- Months 7–12: 1.5% per month (~682,333 tokens/month)
- Months 13–24: 2.0% per month (~909,778 tokens/month)
- Months 25–42: 2.4% per month (~1,091,733 tokens/month)
- Months 43–47: 1.8% per month (~818,800 tokens/month)
- Months 49–59: 0.5% per month (~561,030 tokens/month)
- Month 60: 1.233% per month (~561,034 tokens)

The 45,488,892 SOSANA tokens allocated to the Reserve Treasury are locked in a vesting smart contract, enforcing a strict 5-year release schedule after a 6-month cliff. This smart contract ensures tokens are only released according to the predefined schedule, providing security, predictability, and eliminating the risk of early access or manual interference.

In the chart above, the post-cliff vesting schedule outlines a gradual and disciplined release of reserve tokens over five years. Following a 6-month cliff period with no emissions, the schedule begins with modest monthly unlocks that steadily increase and then taper toward the end. This long-term approach ensures the ecosystem is never overwhelmed with sudden supply shocks. By distributing tokens incrementally — and transparently — SOSANA supports sustainable growth, safeguards market integrity, and aligns token distribution with real community milestones and platform development. The strategy is designed to balance liquidity needs with investor confidence, providing predictability and protection against inflationary pressure.

Community Voting & Rewards

SOSANA holders nominate and vote on the next big Solana projects, earning rewards along the way.

How Voting Works

- Voting follows a 2-week cycle to ensure fairness and engagement.
- A new round starts every other Sunday at 7 PM EST, right after nominations close.
- The community votes for 24 hours to decide which token deserves the next moonshot.
- Voting ends and locks on Monday at 7 PM EST.
- The winner is announced at 7 PM EST (visible to verified voters).
- Public results go live at 8 PM EST for the entire community.

In Case of a Tie

- If two or more tokens receive the same highest number of votes, winnings will be split evenly.
- The Degen Voter Bonus (the 1% tax reflections) is used to buy the winning token and airdrop it to voters who backed the winner.
- The \$500 Nomination Reward is split between the nominators of the tied tokens.

Referral Program & Community Hub

Earn SOSANA & Join the Exclusive Community!

- Invite Friends & Earn SOSANA – Share your personal SOSANA Telegram referral link to invite friends! Complete simple tasks and earn SOSANA rewards. Start now via the @SOSANAReferralBot.
- If you were referred by a friend, use their referral link to join and earn rewards.
- If you weren't referred by anyone, you can still participate by joining through the official SOSANA Referral Bot: @SOSANAReferralBot.
- Join the SOSANA Community Hub – Get exclusive access to SOSANA-holder meetups, networking events, and giveaways at <https://SOSANA.Community>
- Engage in Real-Time Crypto Chats – Connect with fellow Solana enthusiasts, discuss market trends, and find the next big play.
- Take (or Create) Crypto Educational Courses – Whether you're a beginner or an expert, dive into crypto education or contribute your knowledge.
- Surround Yourself with People Who Actually Get It – Only serious degens allowed — a \$50 SOSANA holding is required to keep out the riffraff.
