WHERE DEGEN MEETS DISCIPLINE

SOSANA LITEPAPER

SOSANA is a community-driven meme token built on the Solana blockchain. it's designed to embrace the chaos of crypto while solving real issues — empowering-its holders through:

- A transparent, community-led voting system
- A strategic liquidity plan, and
- A long-term sustainability model

https://SOSANA.io

📑 **TABLE OF CONTENTS**

📜 **SECTION 1: INTRODUCTION**

Where Degen Meets Discipline

Powered by Solana. Driven by trust. Secured by code.

SOSANA is a meme-powered token with real utility — built for degens, skeptics, newcomers, and seasoned builders alike.
It runs on the Solana blockchain, but it's powered by something bigger: **trust**.

This isn't just another meme token. It's a full-stack ecosystem designed to protect its own — **with smart contract–enforced** accountability, wallet-based rewards, and real tools for learning, discovering, and participating in crypto safely.

Whether you're just figuring out what DeFi is, or you've launched ten tokens and got rugged on the eleventh, SOSANA gives you a structured way to:

👥 Join a community that hosts live meetups, token-holder chats (powered by the SOSANA Community Hub), and support systems built for people who actually get it —

with access to exclusive community perks and on-chain tools, including:

- 💸 Token nominations, voting, and snapshot-based competitions
- 🎁 Airdrops from community challenges and promotional campaigns
- 🎓 Certified instructors and wallet-gated learning
- 🔍 Early signals from verified profiles and trending tokens
- 🛡️ Scam protection through our trust-enforced Directory
- 🔍 Search and filter the Directory to connect with verified members and crypto-aligned businesses — by role, category, or local meetup potential
- 🔗 Networking with real, reputation-backed users

This is the platform we all wish we had — the one that rewards participation, enforces accountability, and protects its community with **tech, not talk**.

Not holding $50 in SOSANA yet?
That's fine. The guest Wi-Fi password is **"getrekt."**

📃 SECTION 2: TOKENOMICS

Total Supply: 88,888,888 SOSANA

Official Contract Address: 49jdQxUkKtuvorvnwWqDzUoYKEjfgroTzHkQqXG9YFMj

Circulating Supply at Relaunch: Comprised of user balances restored from the April 29, 2024 snapshot plus initial liquidity. This figure updates dynamically as vesting tokens unlock, and the live circulating supply is visible on-chain and through aggregators such as **CoinMarketCap (CMC), CoinGecko, and Dexscreener**.

At relaunch, balances from the verified snapshot were restored to all eligible wallets, and liquidity was paired with SOL to establish a strong trading foundation. All remaining tokens are locked and released gradually through a long-term, smart contract–enforced vesting schedule designed to support sustainability, transparency, and market trust.

Initial Allocation Breakdown:

- **Vesting Tokens – 33,222,412 SOSANA (37.4%)**
  Formerly referred to as *Team Tokens*. This category includes both Core Team Members and early private pre-sale investors, all subject to the same 18-month vesting schedule. These tokens are released gradually to prevent early dumps and align incentives with long-term growth. (See Section 4)

- **Airdrop & Marketing – 8,888,888 SOSANA (10%)**
  Reserved for community giveaways, promotional campaigns, and strategic marketing to grow the user base.

- **Initial Liquidity Pool – ~9,800,000 SOSANA (11%)**
  Paired with SOL and permanently locked at launch to ensure a strong trading foundation and price stability.

- **Reserve Treasury – ~36,977,588 SOSANA (41.6%)**
  Locked in a treasury smart contract with a 6-month cliff and a 5-year vesting schedule. (See Section 5)

All supply allocations are enforced by smart contract — no manual wallets, no admin overrides, and no off-chain adjustments.

🔒 Snapshot Enforcement & Wallet-Gated Features

To maintain fairness for time-sensitive actions like voting, AMA access, and nomination, SOSANA uses smart contract–based wallet snapshots. These snapshots record balances at specific cutoff times. If a wallet is below $50 at the time of a snapshot, it will not qualify for those specific actions — even if topped up afterward. Eligibility is restored at the next snapshot.

For all other features — including Directory tools, forums, and LMS — wallet balance is checked in real time. Profiles remain visible in the Directory, but certain tools (like CRM, team info, or CTAs) are only usable while the wallet holds at least $50 in SOSANA.

📄 SECTION 3: TRANSACTION TAX MODEL & LIQUIDITY STRATEGY

Every buy, sell, or transfer of SOSANA includes a **3% transaction tax (smart contract–enforced).**

Allocation Breakdown:

- **Stability Wallet — 1.00%**
  Primarily for liquidity health and market stabilization (including market-making). When not required for liquidity, funds may also support broader treasury or operational needs (e.g., vendors, payroll, emergencies). All transactions remain visible on-chain.

- **Degen Wallet (Live Token Rewards) — 1.00%**
  Used to fund Live Token rounds. From each cycle, **$500 in the winning token is reserved from the Degen Wallet for the nominator award.** The remaining balance is used to **market-buy the winning token**, which is then **airdropped proportionally to all verified voters** who backed the winner.

- **Marketing Treasury — 0.50%**
  Dedicated to partnerships, growth initiatives, and promotional campaigns.

- **Pre-Launch Degen Wallet (SOL Rewards) — 0.50%**
  Used to fund Pre-Launch rounds. From each cycle, **$500 in SOL is reserved from the Pre-Launch Degen Wallet for the nominator award.** The remaining

balance is distributed in SOL **proportionally to verified voters** who backed the winner.

Total Tax: 3.00% (capped).

📌 **Reward Allocations:**

- Live Token rewards = **$500 winning-token nominator award + proportional voter airdrops from market buybacks**.

- Pre-Launch rewards = **$500 SOL nominator award + proportional SOL payouts to voters**.

- Stability and Marketing allocations remain treasury-controlled.

📃 **SECTION 4: VESTING TOKENS SCHEDULE (Core Team & Early Private Investors)**

🔐 All vesting tokens are held in a smart contract — with zero early access or manual overrides. To align the core team and early private investors with the long-term health of the ecosystem, **37.4% of total supply (33,222,412 SOSANA)** is locked and released gradually over an 18-month vesting period.

Month-by-Month Release Schedule

Month(s)	% Released
1	10%
2–6	8% per month
7–11	6% per month
12	4%
13–16	3% per month
17–18	2% per month

🗂️ **How It Works**

The schedule starts with 10% in Month 1, then 8% monthly (Months 2–6), 6% monthly (Months 7–11), a smaller 4% in Month 12, and final unlocks of 3% and 2% across the closing months.

🎯 **Why It Matters**

This structure avoids sudden oversupply, discourages short-term dumping, and ensures long-term alignment between the team, early investors, and the community.

🔐 **Enforced entirely by smart contract. Immutable. Unbreakable.**

📃 **SECTION 5: RESERVE TREASURY CLIFF VESTING**

The largest portion of SOSANA's supply — **41.6% (36,977,588 SOSANA)** — is locked in a Reserve Treasury smart contract. These tokens are inaccessible for the first six months, and then released gradually over five years via an unchangeable vesting schedule.

Release Schedule

Month(s)	% Released Per Month
1–6	No emissions (cliff period)
7–12	1.5% per month
13–24	2.0% per month
25–42	2.4% per month
43–47	1.8% per month
48–59	0.5% per month
60	1.233% (final unlock)

💡 **Why It Matters**

Following a 6-month cliff period with no emissions, the Reserve tokens unlock methodically — starting slow, ramping up mid-cycle, and tapering at the end. This staggered release:

- Prevents sudden token flooding
- Aligns emissions with real platform milestones

- Builds long-term investor confidence

- Guards against inflation and artificial hype cycles

🔐 **Fully enforced by smart contract — no manual override, backdoor, or early access. What you see is what the chain enforces.**

🗓️ **SECTION 6: VOTING SYSTEM — LIVE TOKENS**

📅 **Biweekly Cycle**

• Nominations Open: Monday @ 7PM EST

• Voting Begins: Saturday @ 7PM EST

• ⏳ 48-Hour Research & Voting Window — From Saturday 7PM to Monday 7PM

• Locked Hour: Monday @ 7–8PM EST (votes & balances frozen)

• Private Results (holders with at least $50 in SOSANA)**:** Monday @ 7PM EST

• Public Reveal: Monday @ 8PM EST

🕐 **Early Access = Alpha Advantage**

At 7PM EST, holders with at least $50 in SOSANA — whether or not they voted — can view the winner and Top 10; public reveal at 8PM.

Want in early? Don't just watch. Participate. Hold. Win.

📌 Freeloaders see the results at 8PM.

Early access is viewing-only; rewards apply only to voters who backed the winner.

✅ **Eligibility Requirements**

Action — Requirement

• Nominate — $500 SOSANA + Verified Status

• Vote — Verified (KYC or any upgrade) + $50 SOSANA at snapshot

• Claim Reward — Balance must still be held at snapshot

🎯 **Reward Structure**

• 🟠 $500 nominator reward is paid directly from the **Degen Wallet (1.00% allocation).**

• 💸 Remaining **Degen Wallet** allocation is used to buy the winning token from the open market.

• 🎁 That purchased amount is airdropped **proportionally** to all voters who backed the winner.

📌 Rewards are distributed proportionally based on snapshot-held balance at time of voting.

📌 *In the case of a tie, both the voter pool and $500 nomination reward are split evenly across the tied winners.*

🛑 Limits
• A Live Token may win only once per quarter
• SOSANA is ineligible to be nominated or voted on — we are the platform, not a participant

🔓 Enforcement
All nominations, votes, snapshots, and rewards are enforced on-chain.
No backdoors. No edits. No excuses.
No rigging. No rescues. Just transparent, on-chain participation.

📌 **Treasury Timing:** Degen reward conversions are batched around the Live-Token result window to keep movements predictable.

📎 See also: Section 11 (BTB) — Trust overlays are displayed directly in the voting interface, so flagged or suppressed projects are clearly marked before voting.

🌱 SECTION 7: VOTING SYSTEM — PRE-LAUNCH TOKENS
Payout currency: SOL (Solana). Both nominator and voter rewards are in SOL; no project tokens are purchased in Pre-Launch rounds.

Monthly Cycle
• Nominations Open: 1st Monday @ 7PM EST
• Voting Begins: Final Saturday @ 7PM EST
• 48-Hour Research & Voting Window: Sat 7PM → Mon 7PM
• Voting Ends / Locks: Final Monday @ 7–8PM EST (votes & balances frozen)
• Private Results (holders with at least $50 in SOSANA): Monday @ 7PM EST
• Public Reveal: Monday @ 8PM EST

Early Access
At 7PM EST, wallets holding at least $50 in SOSANA — whether or not they voted — can view the winner and Top 10. Everyone else waits an hour.

Eligibility
• Nominate — $500 in SOSANA + KYC-verified Project Owner
• Vote — Verified (KYC or any upgrade) + $50 in SOSANA at snapshot
• Claim reward — Balance must still be held at snapshot

Rewards

• $500 in SOL to the winning nominator from the Pre-Launch Degen Wallet (0.50%)

• Remaining Pre-Launch Degen Wallet SOL is distributed to voters who backed the winner

• No tokens purchased (projects haven't launched yet)

📌 Rewards are proportional to snapshot-held balance at time of voting.

📌 In a tie, SOL rewards split evenly.

Limits

• A Pre-Launch Token may win only once per quarter

• Project owner must remain KYC-verified and approved

Enforcement

All nominations, votes, snapshots, and rewards are on-chain.

📌 **Treasury Timing**: Pre-Launch conversions are batched around the monthly result window.

📄 **SECTION 8: FEATURE OVERVIEW**

SOSANA isn't just a token — it's an ecosystem. One that's built for transparency, trust, and community-powered tools. From discoverability to education, from on-chain voting to replay archives — your wallet unlocks it all.

🧩 **Key Features Available at Launch**

• ✅ Verified Badge + Public Directory Profile
• ✅ Token Nomination & Snapshot-Based Voting
• ✅ Live AMA Booking & Public AMA Calendar
• ✅ Flagging, Complaint Resolution & Trust Scores (BTB)
• ✅ Instructor Dashboard & LMS Course Upload Tools
• ✅ Dashboard Toggles for Premium Users
• ✅ Startup Badges, Top 10 Rankings & Proactive Project Tags
• ✅ Full access to the SOSANA Community Hub

🌐 **SOSANA COMMUNITY HUB — Where Holders Connect**

Whether you're just setting up your first wallet or getting ready to launch your fifth token — the **SOSANA Community Hub** is where it all comes together.

Verified holders gain access to:

- 💬 Real-time crypto chats
- 🎉 Token-holder meetups, giveaways, and networking events
- 🧠 Create or take educational courses (from beginner to advanced)
- 🪩 Manage your Directory profile, Instructor dashboard, and AMA bookings
- 🔐 Token-gated access based on SOSANA holdings and verified role
- 🚀 **And much more — already live and still growing**

Unlike Discord or Telegram, your SOSANA wallet determines what you can see, do, and trust — every feature is gated by verifiable participation. A place where **wallets talk**, **badges matter**, and **reputation follows you**.

Only serious degens allowed.

💰 **Holding just $50 in SOSANA** gets you through the door — no payment required, just proof you're part of the ecosystem.

📃 **SECTION 8A — PLANS & PRICING SNAPSHOT**

---

📌 Footnotes

- $50 SOSANA required for all interactive features.

- $50 to vote; $500 to nominate (snapshot enforced).

- AMA Hosting = Members only. Businesses may Hold (schedule/pay) but must assign a Host.

- Messaging for ⚪ Unverified and 🟡 KYC-Only = reply-only (may reply to incoming messages but cannot start new chats).

- Likes/Reactions in Unverified or Limited states are cosmetic only.

- Reflinks = referral links

📃 SECTION 9: DIRECTORY FEATURES & PROFILE LOGIC

The SOSANA Directory is the public face of the ecosystem — a searchable, on-chain registry of verified Token Projects, Pre-Launch Tokens, KOLs, Vendors, and Members who hold an upgraded account or badge-based role.

📁 Directory Visibility Rules

Completing KYC via the $9.99 verification always triggers public Directory visibility. Even if the user hasn't upgraded or claimed their profile, their listing appears by default once KYC is confirmed.

Profiles created through nomination, AMA scheduling, or badge applications are also public — regardless of upgrade status. These profiles may show overlays like 🟡 "Limited Verified" or ❌ "Inactive," but remain fully searchable in the Directory.

🧂 Who Appears in the Directory?

- **Live Token Projects** appear in the Directory automatically when nominated by any user. Project owners may also create their own profile by completing $9.99 KYC or upgrading to Basic or Premium — or use those options to claim a page that was already created through nomination.

- **Pre-Launch Token Projects** appear only after completing $9.99 KYC or upgrading to Basic or Premium — in both cases, Admin approval is required.

- **Vendors and KOLs** appear after completing $9.99 KYC or upgrading to Basic or Premium.

- **Members** appear only if they:
  - Apply for a badge-based role (e.g., AMA Host, Community Manager) by completing $9.99 KYC or upgrading to Basic or Premium, and receiving Admin approval, or
    - Have upgraded to a Basic or Premium Member plan
  - ❌ Unverified users without a badge or upgrade do not appear publicly in the Directory.

👁️ Member Profile Visibility Controls

Upgraded Member profiles are public by default and currently display:

- ✅ Verification badge

- 👤 Name and/or nickname (based on privacy settings)

- 📍 Location

- 🖼️ Profile photo

- 📜 Bio and social links

- 🎓 Courses offered (if the user is an Instructor)

- ⭐ Reviews and ratings (for Instructors and other badge-based roles; must hold $50 in SOSANA — and each rating must include a written review)

Members may choose to hide or show individual fields — **unless they are Instructors, whose profiles are always public for discoverability and trust.** As the ecosystem evolves, more filters (by token, interest, badge, etc.) will give members even greater visibility control.

🧭 Business Profile Discoverability

Live Token Projects, KOLs, Vendors, and Pre-Launch Tokens are always public once added. Profiles display:

- ✅ Verification badge

- 🏷️ Project or vendor category

- 🏢 Company name

- 🛡️ Trust overlays (Proactive, Under Review, Flagged, Resolved)

- 🏆 Win history (1st Place, Top 10)

- 🎫 Badge roles (Vendor, KOL, Instructor, etc.)

- ⭐ User reviews and ratings (available for all business profiles and badge-based Member roles; $50 in SOSANA required to submit; written review required)

- ❗ BTB Complaint tab with trust overlay history (available only for Token Projects, Vendors, and KOLs; user must be verified and hold $50 to file a complaint)

- 💬 Embedded forum threads (automatically enabled on Premium profiles for AMAs, updates, and trust-related discussions)

❌ Business profiles cannot be hidden manually.

Visibility may be automatically suppressed if:

- KYC expires

- Trust violations occur

- Multiple unresolved complaints are active

All suppression logic is enforced by smart contract or trust overlays — not user preference.
The Directory includes advanced filters for vendor category, badge type, and BTB trust overlays.

And we're just getting started.

📃 SECTION 10: AMA ACCESS

AMAs (Ask Me Anything sessions) are a cornerstone of the SOSANA ecosystem — giving verified Token Projects, Vendors, and KOLs a platform to build trust through live, moderated conversations.

Every AMA includes a professional Host, verified by SOSANA. This ensures quality, fairness, and consistency — every time.

• Attendance is free for everyone. Hosting requires KYC + Directory ownership + a paid Add-On.

🏢 Who Can Hold an AMA?

Only verified business accounts — including Token Projects, Vendors, and KOLs — may schedule an AMA.
To book, a business must:

- ✅ Complete $9.99 KYC or upgrade to Basic or Premium
- ✅ Appear in the public Directory with verified status
- ✅ Choose a Host, or allow Round-Robin assignment

🎙 Who Can Host an AMA?

An AMA Host is a badge-approved individual who moderates on behalf of SOSANA — for the benefit of verified businesses.
To become a Host:

- ✅ Complete $9.99 KYC or upgrade to Basic or Premium
- ✅ Apply and be approved by Admin

- ✅ Hold the AMA Host badge

Once approved, Hosts appear in the Host directory.
Businesses may select a Host based on:

- 🔁 Past experience

- 🌟 Ratings and reviews

- 🗣️ Word-of-mouth or referrals

- 🎙️ Seeing them host a prior AMA

If no preference is made, one is automatically assigned via Round-Robin.

🛡️ AMA Hosts are reviewed and rated, but not complaint-enabled. Any serious issues are escalated through SOSANA Admin for moderation or badge removal. Formal complaints are never filed against Hosts. If any issue arises, it is reviewed by Admin — and any complaints related to the session itself are directed to the verified business that booked the AMA.

🔓 AMA Viewing Access

All users are welcome to attend live AMAs — regardless of wallet balance, upgrade status, or KYC. However, only those holding **at least $50 in SOSANA** may view the AMA or attend the Team Meeting live **inside the SOSANA Directory or Community Hub.**

If your wallet doesn't meet the $50 minimum, or if the session reaches capacity, you'll be redirected to a **SOSANA-controlled livestream** hosted externally (e.g., YouTube, Twitter, Facebook).
The content is identical — but you'll be watching it from outside the gated environment where wallet-based overlays, forum threads, and trust tools appear.

💰 Booking Fee & Promotional Distribution

Every AMA booking includes a $200 hosting fee, payable at the time of scheduling.
This covers:

- A verified SOSANA Host (selected or assigned via Round-Robin)

- Livestream setup, moderation, and post-event recording

- Calendar promotion across the entire platform:
  - — 📅 Displayed in the public AMA calendar inside the Community Hub
  - — 📅 Featured automatically on every Directory profile
  - — 📩 Emailed to everyone who has entered the community (not just verified users)

Your AMA isn't just an event — it's a platform-wide spotlight.
You'll gain pre-event visibility, real-time engagement, and long-term trust through replay access and public calendar exposure.

📺 AMA Replay Access
All AMAs are recorded and stored in the SOSANA Replay Archive.

- **Premium businesses** may publish the replay publicly on their Directory profile

- **Basic businesses** may not publish, but may share the recording externally via:
  - 📣 Social media
  - 📁 Sales decks or announcements
  - 🔒 Private investor materials

Replay access is included for all verified businesses — but public publishing is Premium-only.

📡 Live Streaming (AMAs Only)
All AMA sessions are livestreamed to public platforms, including:

- Facebook

- Twitter

- YouTube

- Other supported channels

Sessions include full video/audio, screen-sharing, and audience interaction — all moderated by a verified Host.
Live Streaming expands your reach and brand visibility — especially for Premium users who can showcase their replay on-platform.

👥 Live Team Meeting Add-On

Available as a paid upgrade, Live Team Meetings are private, Zoom-style sessions for up to 30 participants. Both Members and Businesses may purchase access — regardless of affiliate status.

- 🎯 Ideal for internal planning, investor calls, or closed-group sessions

- 🔒 Not livestreamed by default

- 📼 Recording is optional and follows the same replay rules:
  — **Premium** users may publish or share
  — **Basic** users may share externally, but not publish to the Directory

- 💳 Pricing is still being finalized

If the 30-person capacity is reached — or if a user does not hold at least $50 in SOSANA — the session is viewable via a **SOSANA-controlled livestream**, outside of the Community Hub interface.

No Host is provided. These meetings are self-run — but just as impactful for off-the-record trust-building.

✅ Booking Enforcement

- ✅ Only verified businesses may schedule AMAs

- ✅ Only badge-approved Hosts may moderate

- ✅ Booking validation and badge enforcement are controlled by smart contract

Every AMA is on-chain proof of credibility.
It's more than a conversation — it's a commitment to transparency.

📃 SECTION 11: THE BETTER TOKEN BUREAU (BTB)

Smart Contract–Enforced Trust. Public Accountability.
The Better Token Bureau (BTB) is SOSANA's on-chain reputation engine — a

decentralized system for transparency, complaint resolution, and trust enforcement.

Instead of vague reviews or unverifiable reports, BTB uses smart contract logic to track, score, and flag every verified business profile — including Live Token Projects, Pre-Launch Tokens, KOLs, and Vendors.

🛡️ How It Works
BTB continuously evaluates verified business profiles based on:
- ❗ Complaints submitted by the community
- ✅ Verification status and wallet activity
- 🔍 Admin response behavior
- 🕵️ Trust overlays (e.g., Under Review, Flagged, Resolved, Proactive)

If issues go unresolved, visibility may be automatically suppressed across the platform.

When addressed, a ✅ "Complaint Resolved" badge appears on the profile — restoring trust and reputation.

❌ Instructors, Community Managers, and AMA Hosts cannot receive BTB complaints.

Any serious issues involving these roles should be reported directly to SOSANA Admin via the "Submit a Report" form in the Community Hub's Help & Trust menu.

To submit a report, users must be verified (via $9.99 or any upgrade) and hold at least $50 in SOSANA at the time of submission.

Admin may take action by reviewing history, flagging behavior, or revoking badges. Only verified business profiles — including Token Projects (Live and Pre-Launch), KOLs, and Vendors — may receive formal BTB complaints.

BTB complaints do not appear in the general reviews section. Instead, they live in a dedicated **BTB Complaint tab** on each business profile — and are mirrored into the BTB forum thread for public tracking. This ensures complaint visibility is separate from normal user feedback, while still reinforcing accountability.

📃 Complaint Filing Requirements
To file a BTB complaint, users must:

- Be verified (via $9.99 KYC or any upgrade)

- Hold at least $50 in SOSANA at the time of submission

Only verified users meeting these requirements may access the complaint system.

🔐 Wallet-Based Enforcement

Profiles may be flagged or hidden based on:

- ❌ Expired KYC

- ⚠️ Unresolved complaints

- 🚫 Violations of trust criteria

- 🔐 Smart contract triggers tied to wallet behavior

Admins do not control visibility. The chain does.

🔗 Where BTB Tags Appear

Trust tags and complaint overlays appear not just in the Directory, but also in:

- 🎙️ AMA scheduling panels

- 🗳️ Live and Pre-Launch voting interfaces

- 📊 Dashboard cards and leaderboard tiles

These trust signals appear before you vote, engage, or book — reinforcing accountability platform-wide.

👨‍💼 Admin Override (Trust Suppression)

While the BTB system is governed by smart contract logic, SOSANA Admins may apply or remove suppression manually — such as disabling AMA bookings or voting access — before the 3-complaint threshold is met.

This override is reserved for rare cases involving:

- 🚨 Clear fraud

- 🪄 Abuse of users

- 🛡️ Imminent risk to the community

All overrides are logged transparently. Abuse of power isn't just discouraged — it's structurally prevented.

🌐 Coming Soon: BetterTokenBureau.com

In the next phase, SOSANA will launch a standalone trust portal — **BetterTokenBureau.com** — where anyone can view verified business profiles, trust scores, complaint records, and resolution history for Token Projects (Live and Pre-Launch), KOLs, and Vendors across the crypto industry.

But it's not just for transparency — it's also actionable.
Complaints can be lodged directly from inside the SOSANA Community, or externally via BetterTokenBureau.com — making the system accessible even to those outside the platform.

This public site will sync with the SOSANA Directory and Community Hub, giving token holders, partners, and researchers a powerful way to engage with — and enforce — accountability across Web3.

🎯 Why BTB Matters

• No favorites. No backroom deals.
• Trust is earned, measured, and enforced — not bought.
• Visibility is conditional. Reputation is tracked.

BTB isn't just a badge system. It's a public trust layer — enforced by code.
It's what separates SOSANA from the chaos of the rug-prone world outside.

📃 SECTION 12: REFERRAL PROGRAM, AFFILIATE RANKS & COMMUNITY GROWTH

Two paths. One ecosystem. All wallet-traced.

1) Airdrop Rewards via @SOSANAReferralBot

• Monthly rewards: Top 5 split $500 in SOSANA.
• How to earn: 100 points per Telegram referral; 20 points per completed social task (Twitter, Discord, YouTube, etc.).
• Minimum qualifier: 1,000 points in a month.
Note: No upgrade, no commissions — this is separate from Affiliate payouts.

2) Affiliate Program (Upgrade Required)

Unlock verified referral links, smart-contract payouts (plan upgrades, platform fees, eligible token purchases), CRM, and commission dashboards.

Not commissionable: AMA bookings, fiat wallet onboarding, off-chain services.

Affiliate Ranks: No Rank → Degen → HODLer → Whale

1. **No Rank (Unranked Affiliate)** — Requirements: none. Commissions: Level 1: 20%, Level 2: 15%, Level 3: 15%.

2. **Degen** — Requirements: 3 direct affiliates. Commissions: Level 1: 25%, Level 2: 15%, Level 3: 25%.

3. **HODLer** — Requirements: 10 directs + 100 team (max 30 from any one leg). Commissions: Level 1: 25%, Level 2: 15%, Level 3: 30%.

4. **Whale** — Requirements: 10 directs + 3 separate legs, each with a qualified HODLer. Commissions: Level 1: 25%, Level 2: 20%, Level 3: 35%.

📊 Commission Summary

Rank	Level 1	Level 2	Level 3	Requirements
No Rank	20%	15%	15%	None
Degen	25%	15%	25%	3 directs
HODLer	25%	15%	30%	10 directs + 100 team (max 30/leg)
Whale	25%	20%	35%	10 directs + 3 legs w/ HODLer

🎯 Bottom Line

Every payout, referral, and rank-up is wallet-traced and on-chain. Smart contracts handle the math; you focus on growth.

📃 SECTION 13: LMS & INSTRUCTOR TOOLS

Learn. Teach. Earn. Repeat.

The SOSANA LMS (Learning Management System) is built for everyone — from complete beginners to seasoned crypto veterans.

Whether you're setting up your first wallet or preparing to launch your own token project, SOSANA School gives you the tools to grow, connect, and lead.

🎓 **For Learners**

Access to the LMS requires holding at least $50 in SOSANA — proving you're not just watching, but participating.

🧠 **Sign up with:**

- Crypto wallet

- On-ramp solution (e.g., MoonPay)

- SOSANA token balance

📚 **Courses cover topics like:**

- 📘 Wallet setup, DeFi basics

- 🔐 Security, scams, and safety

- 📈 Tokenomics and liquidity

- 🏗️ Launch planning, team building, DAO logic

- 📜 Real-world marketing, exchange strategy, and legal fundamentals

🎥 **Learning formats include:**

- 📺 Video library (free and paid)

- 📡 Live-streamed sessions

- 👥 One-on-one tutoring with verified Instructors

SOSANA School is where new learners become leaders — with tools, mentorship, and smart contract–driven trust.

📒 **Fiat-Based Wallet Onboarding**

SOSANA provides two free onboarding videos — one showing how to download a wallet, and one showing how to purchase SOSANA. These are available to all new users, at no cost.

But for those who feel intimidated by crypto tech and need hands-on help, SOSANA also offers a one-time, fiat-paid tutoring session led by a Certified Instructor.

These "Wallet Setup Only" sessions are designed to help new users:

- 🎛️ Download and configure a crypto wallet

- 💸 Acquire $50 in SOSANA

The session is paid via credit card (Stripe) and does not require KYC. It exists purely to help new users cross the trust barrier and begin using the platform with confidence.
These sessions are visible only to users who **have not yet reached the $50 SOSANA threshold**, and they are **not eligible for affiliate commissions** under any circumstance.

❌ These sessions may not be used for general education or tutoring beyond wallet setup.

💂 Become a Certified Instructor
Want to build a side-hustle — or even a full-time crypto education business? SOSANA lets you do both.

As a Certified Instructor, you can teach, upload content, and earn directly from the community — while building public trust through reviews, ratings, and wallet-based discoverability.

To become an Instructor, you must:

- ✅ Upgrade to Affiliate Basic or Affiliate Premium

- ✅ Complete instructor onboarding and pass certification

- ✅ Receive Admin approval and badge activation

Once certified, you'll gain access to the full Instructor tool suite — and appear publicly in the Directory, complete with profile, courses, and reviews.

📊 Instructors may be rated by students after each session or course — adding credibility and visibility to your teaching brand.

Instructors cannot be complaint-enabled — even if they are also listed on a business profile. BTB complaints may only address the business's behavior as a whole, not the Instructor's teaching performance. Instructor reviews and accountability are handled exclusively within the LMS.

🧠 For standard tutoring (beyond wallet setup), learners are not required to complete KYC — only to hold $50 in SOSANA.

🛠️ **Instructor Tools Include:**

- ✅ Uploadable videos, course playlists, and training series

- ✅ Downloadable files, quizzes, and supplementary materials

- ✅ Student review and feedback system

- ✅ Livestream scheduling with audience filters

- ✅ One-on-one tutoring availability

- ✅ Content gating by token balance, badge role, or business tier

SOSANA's LMS isn't just about learning — it's about teaching with trust.
If you've got knowledge, you've got earning potential.

📜 **SECTION 14: COMING SOON**

SOSANAbot & Pre-Launch Token Launchpad
Telegram-native. Wallet-aware. Referral-ready.

Phase 2.5 brings two major upgrades to the SOSANA ecosystem — and both are built for speed, scale, and trust:

🤖 **SOSANAbot**
Your personal command center — embedded in Telegram and your SOSANA Directory profile.

SOSANAbot connects directly to the affiliate smart contract and is fully integrated with your wallet and directory tools. It gives users fast, trust-aware access to key features like:

- 🔍 View token stats, wallet holdings, and trading shortcuts
- 🪪 See trust tags, suppression status, and visibility rank
- 🤝 Token-Based Networking & Social Tools — mutual follows, private messaging,

discoverability by wallet overlap and roles

- 🎇 Track affiliate tree growth and earnings in real time
- 🔢 Pull QR codes, referral links, and smart contract payout info
- 💬 Sync your trading life with your social wallet

SOSANAbot doesn't just give you data — it gives you direction.

🔳 *Mobile tools and notifications will roll out in future phases — including SOSANAbot alerts, CRM dashboards, and LMS access — giving users a seamless experience across Telegram, web, and mobile.*

🚀 Pre-Launch Token Launchpad

SOSANAbot will also power the **Pre-Launch Token Launchpad** — a first-of-its-kind marketplace for discovering and purchasing early-stage tokens, complete with smart contract–enforced referral rewards.

Pre-Launch Token Projects commit to supply, pricing, vesting, and KYC — before going live. Community members can buy early and refer others — but only **upgraded affiliates** earn multi-tier rewards on those referrals.

Launchpad features include:

- 📃 Pre-Launch token listings from **verified project owners**, with full creator disclosures and validated supply terms
- 💼 Smart contract–enforced commission routing
- 🔁 Tiered payout trees (up to 6 levels, where enabled)
- 📈 Treasury tracking and participation stats
- 💰 Payments accepted in SOL or via fiat (e.g., card-based on-ramp)
- 🔐 KYC verification and supply validation required before listing approval
- 🪂 Purchases appear inside SOSANAbot and auto-convert to live tokens upon launch

This isn't airdrop hype — it's real early-stage access with real protections.

Together, SOSANAbot and the Launchpad form a powerful expansion of what SOSANA can be:

On-chain. On-brand. On your phone.

📃 SECTION 15: TRUST & VISION

The Future of Credibility in Crypto

SOSANA isn't just a platform.

It's a response to everything that's gone wrong in crypto.

We've all seen it:

- 🥚 Anonymous teams
- 💥 Pump-and-dumps
- 🥴 Paid listings with fake metrics
- 🪃 No accountability when things go south

We've lived through the scams. Some of us got rugged trying to build something better.

Now we've built it.

🛡️ Verification Isn't Just a Badge. It's a Gateway.

Trust in SOSANA is enforced by smart contract — not marketing.

Profiles that lie, cheat, or ghost their users don't just get flagged.

They get suppressed.

Every nomination. Every AMA. Every purchase, vote, or course.

It's tracked. It's recorded. It's enforced by code.

🌍 Community-Powered. Chain-Protected.

We don't sell influence. We don't run pay-to-play.

Visibility is earned. Credibility is enforced.

Complaints, reviews, and trust overlays are not suggestions — they're enforced through smart contract rules and public moderation triggers that no project can bypass.

These enforcement rules apply consistently across the dApp, SOSANAbot, Launchpad, and Marketplace.

SOSANA gives every wallet a voice — but only if it earns it.

This is the platform we all wish we had —

The one that rewards participation, enforces accountability, and protects its community with tech, not talk.

✅ **Real transparency.**
✅ **Real trust.**
✅ **Real tools for degens, builders, educators, and believers.**

We're not just fixing crypto's problems.
We're building the system it should've had all along.

📄 **SECTION 16: EXPANDING TRUST VISIBILITY (Coming in Phase 3.0)**
Verified On-Chain. Recognized Beyond the Platform.

SOSANA's trust system already powers complaint resolution, suppression overlays, and real-time trust scoring across the Directory, Dashboard, AMA scheduler, and Community Hub.

But in the next phase, that system will evolve — extending **public trust visibility** beyond SOSANA itself.

Soon, verified profiles will be able to display their trust status across external tools, trading platforms, and token directories — helping the outside world distinguish real builders from lookalike scams.

🛡️ **Why It Matters**

Most crypto ecosystems still rely on subjective reviews, unverifiable profiles, or third-party badge schemes.

SOSANA flips that — offering **real, wallet-backed trust** that can be referenced across the Web3 world:

- ✅ Verified = KYC + wallet enforcement
- ❗ Complaints are real, visible, and resolved transparently
- 🔴 Suspensions and trust flags follow the user, not just the platform
- 🎯 Clean actors earn visibility and recognition

This protects users, empowers builders, and positions SOSANA as a trust standard in a noisy, rug-prone space.

🌐 Where It's Going

In the future, your SOSANA profile and reputation may be:
- 🔗 Viewable via verified links on third-party tools
- 🛠️ Embedded in tokens, dashboards, and external profiles
- 🚨 Flagged or suppressed when trust fails — even beyond SOSANA

And yes — the **BetterTokenBureau.com** portal will eventually act as a **global trust reference point**, helping users, partners, and the public see what the blockchain already knows.

🎯 Built to Travel. Designed for Integrity.

SOSANA's trust system isn't static. It moves with you.
And soon, it will move *in front of you* — guiding others toward the credible, and away from the dangerous.

Verified trust isn't just internal anymore.
It's portable, provable, and coming soon to the rest of Web3.

📃 SECTION 17: A FINAL WORD
You're early. Stay ready.

Everything you've seen in this Litepaper — from trust enforcement to replay access, from wallet-based discovery to token-powered education — is just the beginning.

The foundation is live. The tools are working.
And something much bigger is coming.

We can't tell you what it is just yet.
It's just too big.

But those in the know...
say it might just be the biggest thing to hit SOSANA yet.

Stay verified. Stay connected.
Stay ahead of the next wave.

Because the next wave?
Might just be you.

⚡ **Reminder:** The only official SOSANA contract address is:
